DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-10,12,13,15,16 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,3,8,9,10,12,13,15,16 are rejected under 35 U.S.C. 102(b) as being anticipated by Negus et al (PN 5,097,471).

Negus et al discloses a passive mode-locked laser system having a resonant cavity established by mirrors with a gain medium, where in column 4 lines 4-10 discloses the use of a laser diode as the pump source and suggest operating the laser system as CW or pulsed, as described columns 3 and 4 and illustrated in figures 1-5.

In column 3 lines 1-6, Negus et al discloses a technique to obtain passive mode-locked pulses by perturbations applied to the system, these perturbations including the movement of a cavity mirror thereby changing the alignment of the mirrors or the length of the cavity.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2828

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Negus et al (PN 5,097,471) in view of Anthon et al (PN 4,933,947) and Mitsuhashi et al.

Regarding claim 4,

Negus et al illustrates a linear cavity, however it is well known in the art of the linear and ring cavity being equivalently functional, as shown by Anthon et al in figure 1 having a linear cavity and in figure 3 a ring cavity.

Regarding claims 5-7,

It is well known in the art of laser diodes with dual output facets will provide different wavelengths, as illustrated in figure 4 by Mitsuhashi et al.

Allowable Subject Matter

Claims 11,14,17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding claims 11,14,17, none of the prior arts of record discloses a semiconductor laser having the step of misaligning the mirror to favor amplification of a wavelength shorter than the center wavelength.
